

# Flowplayer Integration

The image shows a code editor with HTML code for Flowplayer integration and a screenshot of the Flowplayer web interface. Red boxes and arrows highlight key components:

- 1**: Points to the SDK script tag: `<script src="https://nobuffer.net/sdk/kilosdk.js"></script>`
- 2**: Points to the Flowplayer div element with the `id` parameter: `<div data-player-id="711f56c-ed91-4e49-adc1-89276a3d3454" id="flowplayer_player1">`
- 3**: Points to the SDK initialization code: `kilosdk.init({ videoId: '9876543212', player: { type: 'FlowplayerPlayer', instance: document.getElementById('flowplayer_player1') }, modules: [ { type: 'Reward' } ] });`

The Flowplayer interface screenshot shows the 'Embed code' dialog box, which displays the generated embed code for the player.

1. Add SDK script tag to the page

```
<script src="https://nobuffer.net/sdk/kilosdk.js"></script>
```

2. Add Flowplayer to the page; add the *id* parameter to the flowplayer div element

3. Initialize SDK

```
kilosdk.init({  
  videoId: <unique video id>,  
  player: { type: 'FlowplayerPlayer',  
            instance: <flowplayer div element>},  
  modules: [{type: 'Reward'}]  
});
```
